

FACTS ON THE CALIFORNIA IMMUNOLOGY MEDICAL RESEARCH & CURES INITIATIVE

Measure Supports Immunology Research to Prevent and Cure Cancer, Alzheimer's, Heart Disease, and Other Debilitating Diseases – In Our Lifetime

RESEARCH TO FIND CURES FOR MAJOR DISEASES IN OUR LIFETIME

- The measure will provide \$8.4 billion in state bonds to **fund breakthrough immunology research to develop life-saving cures** for the most persistent and debilitating diseases impacting nearly every California family.
- Immunology uses the body's own immune system to detect and stop diseases.
- **Immunotherapies are already saving and extending lives** for patients dealing with cancers like melanoma, lung cancer and leukemia. Patients who have been weeks away from dying have received breakthrough treatments that have sent them into long-term remission.
- **Immunotherapies have the potential to prevent and cure a whole range of diseases** including cancer, heart disease, Alzheimer's, Parkinson's, diabetes, ALS, muscular dystrophy, rheumatoid arthritis, lupus and multiple sclerosis.¹
- The measure specifically designates at least \$4.2 billion for research related to the prevention, treatment, and cure of **cancer, heart disease and Alzheimer's**.
- Millions of families suffer when devastating diseases upend or claim the lives of loved ones. This measure will invest in **promising immunotherapy research that can prevent and cure diseases that could save your life or the life of someone you love**.

CALIFORNIA CAN LEAD THE WAY AMIDST FEDERAL UNCERTAINTY

- **Federal funding cuts and uncertainty are delaying life-saving medical research** at California universities and research institutes. *We are in a race against time, and patients and their loved ones can't afford to wait.*
- This measure creates a **stable source of funding for scientists and medical experts** and **accelerates the pace of discoveries to help the tens of millions of patients** who are fighting cancer, heart disease, Alzheimer's and other debilitating diseases.
- **This measure will make California a national leader in breakthrough medical research**, fostering collaboration between leading California-based universities, scientists and physicians.
- This measure will bring further investment into our state, **creating billions of dollars in economic benefits and tens of thousands of good-paying jobs**. Scientific research has become a critical economic engine in California, and studies show that each dollar invested in medical research returns three dollars back into our state's economy.²

STRONG ACCOUNTABILITY & TAXPAYER PROTECTIONS

- **The measure is designed to fully pay for itself.** Ten percent (10%) of all proceeds from the licensing of immunotherapies must be returned to California to offset the total costs of the bond measure, including interest.
- The measure **limits state administrative costs** to no more than 2%, implements rigorous conflict of interest rules, requires all grant funds be spent directly on medical research, requires public disclosure of all spending, and mandates independent financial audits.
- **Funds can only be granted to California-based nonprofit universities and research institutes**, and no funds can be given to for-profit corporations.

REDUCES HEALTHCARE COSTS

- **Any cure or immunotherapy developed** through research funded by this initiative **must be made available to California patients at a 20% discount** below the national average.
- Preventing and curing the most pressing diseases will also **reduce long-term healthcare expenses and save the state and families tens of billions of dollars** in avoided medical expenses.³
